andrianrian263@gmail.com | www.linkedin.com/in/andriansyah-979b2a310

I am a fresh graduate in Informatics from Ahmad Dahlan University with a strong interest and competency in software development, particularly in integrating Artificial Intelligence with web-based systems. During my studies, I developed several AI-based projects using TensorFlow and Python, mainly in the field of Computer Vision for object detection and classification. In addition, I have hands-on experience as a Full Stack Developer using Laravel, PHP, and MySQL to build structured and functional web-based information systems. I am experienced in end-to-end application development, including database design, backend development, API development, and frontend implementation. I have also worked on data analysis and visualization using Python, and built interactive dashboards with Streamlit to support effective data presentation. I am highly motivated to learn, adaptable to new technologies, and passionate about building scalable backend systems, API integrations, and intelligent applications that deliver real value to users.

Project & Activites

Belens - Bangkit Capstone Project (2024)

Developed an AI-powered health application to help users monitor sugar intake from packaged beverages.

- Served as an AI Engineer, responsible for developing and deploying machine learning models.
- Designed and trained a product detection model to automatically identify beverage packaging and retrieve sugar content information.
- Built a pipeline for image processing and model inference using TensorFlow.

Github : <https://github.com/Belens-Capstone-Project>

GANISSA – Alumni Information System for SMAN 1 Pemalang (2025)

Developed a web-based information system to manage alumni data and communication.

- Worked as a System Analyst, responsible for requirement analysis and system specification.
- Produced system documentation including use case diagrams, DFD, ERD, and technical specifications.
- Designed system architecture using UML.
- Collaborated with UI/UX designers and developers to ensure alignment between system design and implementation.

Website : <https://ganissapemalang.or.id/>

iPhone Market Data Visualization and Analysis (2011–2023) – Final Project (2025)

Developed an interactive dashboard using Streamlit to analyze global iPhone market trends from 2011 to 2023.

- Processed and analyzed datasets related to user growth, sales, and operating system market share.
- Created interactive data visualizations using Python (Pandas, Plotly) to explore trends.
- Built a dynamic dashboard enabling users to perform self-service data exploration.

Github : <https://github.com/NightEye000/TA-Visualisasi-Data.git>

Gunung Tambalan Village Profile Website (2025)

Built a village profile website using Laravel 11 CMS to manage public information, galleries, and contact forms.

- Worked as a Full-Stack Developer, responsible for database design, backend development, frontend implementation, and deployment.
- Developed RESTful features for content management and admin operations.
- Implemented dynamic admin panel for content management.
- Built authentication system and input validation for secure form handling.

Github : https://github.com/NightEye000/website_profile_gunung_tambalan

ExusOps – Internal E-Commerce Operations Platform (2026)

Developed a web-based internal operational management platform for e-commerce business processes including inventory, order management, logistics tracking, financial reporting, and advertising analytics.

- Worked as a Full-Stack Developer, responsible for backend development, API integration, frontend implementation, and system architecture design. Developed a multi-service operational platform using Laravel 11, Vue 3, Go, MariaDB, Redis, and WebSocket technology.
- Built automated synchronization services for logistics and advertising data from multiple third-party platforms.
- Implemented real-time monitoring features using WebSocket for live synchronization status and operational tracking.
- Developed financial management modules including expense tracking, commission calculation, transaction reconciliation, and profit & loss reporting.
- Designed role-based access control (RBAC) with secure authentication and permission management using Laravel Sanctum.
- Implemented API integration architecture and scheduled synchronization using Go services and cron jobs.
- Applied security best practices including encrypted credential storage, CSRF protection, prepared statements, and security middleware configuration.
- Built interactive analytics dashboards and operational reports using Chart.js for business monitoring and decision-making.
- Optimized operational workflows by consolidating multiple merchant and logistics platforms into a centralized management system.

ExusCommerce – Customer-Facing E-Commerce Platform (2026)

Developed a customer-facing e-commerce platform integrated with internal operational systems to support online transactions, order management, and fulfillment processes.

- Worked as a Full-Stack Developer, responsible for frontend development, backend services, API integration, and deployment architecture.
- Built a modern e-commerce storefront using Vue 3, Laravel 10, Tailwind CSS, and Vite.
- Developed RESTful APIs and synchronization services to connect storefront orders with the ExusOps operational platform.
- Implemented customer authentication and session management using Laravel Sanctum and Pinia state management. Integrated Midtrans payment gateway for secure online payment processing and transaction handling.
- Designed product catalog systems including categories, variants, flash sales, and promotional banners.
- Developed real-time order status synchronization between operational and customer-facing systems.
- Applied reusable component architecture and shared design systems to accelerate frontend development.
- Optimized storefront performance and mobile responsiveness for improved user experience.
- Contributed to scalable system architecture enabling seamless communication between operational and commerce platforms.

Experience

Laboratory Teaching Assistant – Informatics Logic (September 2023 – February 2024)

Ahmad Dahlan University – Yogyakarta

- Assisted students during hands-on laboratory sessions in Informatics Logic.
- Explained the application of logical concepts in programming through practical exercises.
- Guided students in solving technical problems during lab activities.

Laboratory Teaching Assistant – Statistics (September 2024 – February 2025)

Ahmad Dahlan University – Yogyakarta

- Led hands-on laboratory sessions for Statistics courses.
- Guided students in data processing, analysis, and interpretation using practical tools.
- Assisted students in resolving technical and analytical challenges during lab work.

Laboratory Teaching Assistant – Decision Support Systems (September 2025 – February 2026)

Ahmad Dahlan University – Yogyakarta

- Led laboratory sessions focused on decision support system applications.
- Guided students in using software tools for decision-making processes.
- Provided technical assistance and troubleshooting during lab activities.

Machine Learning Cohort – Bangkit Academy Batch 2 (September 2024 – January 2025)

PT Dicoding Akademi Indonesia – Remote

- Completed 900+ hours of intensive training in Machine Learning, AI development, and soft skills.

- Participated in structured learning modules including AI development, capstone project, and English training.
- Strengthened technical skills in building machine learning models and collaborating in team-based projects.

Fullstack Programmer Internship (Oktober 2025 – Maret 2026)

PT Senesa Global Solusi – Hybrid

- Developed and maintained full-stack web applications using Laravel, PHP, MySQL, and JavaScript.
- Designed and implemented RESTful APIs for third-party integrations and internal services.
- Built backend and frontend features to support business operations.
- Monitored system performance and ensured application reliability.
- Identified, analyzed, and resolved bugs and system errors.
- Deployed applications to production environments and managed version control using Git and GitHub.
- Contributed across the full software development lifecycle (development, testing, deployment, maintenance).

Key Projects::

1. ERP-based Operational Management System (Internal)

- Developed order and logistics management system using Laravel.
- Integrated third-party APIs for real-time data synchronization.
- Built financial modules for commission calculation and reporting.
- Implemented role-based access control (RBAC) for system security.

2. Multi-Tenant Partner Portal

- Developed partner portal for managing orders, balances, and transactions.
- Designed multi-tenant architecture with role-based data isolation.
- Built real-time monitoring dashboards for operational insights.

3. Employee Management System (Internal)

- Developed internal platform using native PHP and JavaScript (SPA).
- Built modular RESTful APIs from scratch to support employee data and activity tracking.
- Implemented a task and activity tracking system to monitor employee work on an hourly basis.
- Designed features for tracking daily work logs, allowing management to evaluate employee productivity and task distribution.
- Developed a scheduling and monitoring system to provide visibility into each employee's daily activities and performance.
- Implemented a GPS-based attendance system integrated with performance tracking dashboards.

Skills

Hard Skills	Soft Skills
• Machine Learning • Deep Learning • Data Mining • System Analysis • Data Visualization & Statistics	• Analytical Thinking • Problem Solving • Time Management • Team Collaboration • Responsibility

Technical Skills

AI / Machine Learning

- TensorFlow, Keras, Scikit-learn
- Deep Learning & Computer Vision
- Data Preprocessing & Model Deployment (Flask, Streamlit, Google Cloud Platform)

Data Analyst

- Python (Pandas, NumPy, Matplotlib, Seaborn, Plotly)
- SQL, Data Cleaning & Data Visualization
- Microsoft Excel (Pivot Table, Chart, Statistical Analysis)

System Analyst

- UML (Use Case, Activity, Sequence, Class Diagram)
- ERD, DFD, Requirement Analysis & Documentation
- Tools: Draw.io , AstahUML

Web Developer

- Laravel (PHP), JavaScript, HTML, CSS
- MySQL, phpMyAdmin
- REST API Development & Integration
- Backend Development & System Architecture

Tools

- Visual Studio Code, IntelliJ IDEA
- Jupyter Notebook, Google Colab
- Git & GitHub (Version Control & Collaboration)

Education

- **Ahmad Dahlan University (2022 – 2026)**
S1 Informatics – **GPA: 3.89**
- **MAN Insan Cendekia Jambi (2018 – 2021)**
Math and Science – **Final Score: 97.84**

Languages

- English (Intermediate)
- Russian (Basic)
